

ChimeNet hosts its private Cloud infrastructure at its resilient data center, delivering secure and **highly available cloud services** through a flexible pay-as-you-go consumption solution.

Cloud Services

ChimeNet's fully-managed Cloud solutions are supported by trained Cloud architects who will assist throughout the Cloud migration process. As a small, nimble Cloud provider, ChimeNet tailors its Cloud Services to align with individual needs and budgets. ChimeNet's premium service, at a not-so-premium-price, reduces operating costs by allowing clients to purchase only the compute and storage services required.

ChimeNet's Cloud infrastructure:

- Allows for fast network deployments
- Is designed and built on industry tested standards
- Provides secure, multi-tenancy environments
- Offers clients fully managed cloud deployments – migration to production
- Delivers competitive storage and compute capabilities
- Data back-up options available
